# Internet Security 2008

Trend Micro Internet Security 2008 makes it easy to protect your home or small business network, personal identity, and online activity. It guards against present viruses, spyware, and identity theft as well as the web threats of tomorrow. Confidently e-mail, shop, bank, or share photos online, knowing your privacy and files are well protected.

## Features of Internet Security 2008

### What's New

### Key Features

- Anti-virus
- Anti-spyware
- Email safety scan
- Protection against rootkits
- Proactive intrusion blocking
- Anti-spam
- Two-way firewall
- Home network protection
- Website authentication
- Parental controls
- Data theft prevention

#### **Prevent Unauthorized Changes/Proactive Intrusion Blocking**

Improved security policies find and stop unwanted attempts to change your operating system and critical software.

#### **Image Spam Filtering**

Stop seeing spam that tries to evade filters by delivering images instead of just text.

#### **Worry-Free Web Surfing**

Identify suspect Web sites before you open them. Disable links to untrustworthy Web sites received by email (available early 2008).

#### **Customizable Security Warnings**

Decide exactly how often you want to receive warnings about security threats.

#### **Security Activity Reports**

Regular reports summarize how Trend Micro Internet Security has protected you.

### System Requirements

- Windows Vista™ Home Basic, Home Premium (32/64 bit), Business (32/64 bit), Ultimate (32/64 bit)
- Windows XP Professional or Home Edition with Service Pack 2 (32 bit)
- Windows XP Media Center Edition 2004 or 2005 (32 bit)
- Windows XP Tablet PC Edition 2004 or 2005 (32 bit)

# Worry-Free Business Security

Rely on Trend Micro's Worry-Free Business Security Advanced and Standard solutions to protect small businesses and their reputation against data theft and risky websites. Trend Micro's safer, smarter, simpler security blocks web-based threats and other malware to protect business assets and customer information.

## NEW KEY FEATURES AND BENEFITS

New Features	Benefits
<b>Web Threat Protection</b>	
Web threat protection prevents exposure without relying on matching each threat to a pattern file. Every day 3 billion websites are tracked, protecting customers from 8–10 million risky websites.	<ul style="list-style-type: none"> <li>Prevents damage from web threats (data theft, damaged PCs) by preventing exposure to infected websites</li> <li>Real-time, constantly updated protection, does not slow down computers</li> </ul>
<b>Worry-Free Location Awareness</b>	
Automatically changes Worry-Free Security settings on notebooks to set protection for employees inside or outside the office.	<ul style="list-style-type: none"> <li>Provides optimal security based on current environment</li> <li>Minimizes additional effort by auto-configuring settings</li> </ul>
<b>Application Behavior Monitoring</b>	
Monitors application activities and prevents unauthorized, harmful changes to your computer.	<ul style="list-style-type: none"> <li>Dynamically adapts to new, emerging threats</li> <li>Real-time prevention capabilities use less resources to protect</li> <li>Provides lockdown protection for Intuit® QuickBooks® products</li> </ul>
<b>Multilayer Spam Blocking</b>	
Blocks spam before it reaches business. Integrated protection layer stops spam by checking IP addresses against Trend Micro's constantly updated database of known spam sources.	<ul style="list-style-type: none"> <li>No wasted network bandwidth clogged with spam</li> <li>No wasted Exchange server performance spent processing spam</li> <li>No wasted disk space used to archive spam</li> </ul>

**Worry-Free Business Security solutions are safer, smarter, and simpler** so that businesses can stop worrying about security and focus on their business.

- **Safer** because Trend Micro's unique web threat protection technology rapidly protects business assets and customer information from web threats to prevent business disruption and data theft.
- **Smarter** because Trend Micro's web threat protection hosted security technologies are constantly updated, requiring no configuration or local maintenance, and won't slow down computers. Multi-layer spam blocking means spam is stopped at the datacenter before it reaches the Microsoft Exchange server. This approach ensures network bandwidth, servers, and disk space are not clogged with spam.
- **Simpler** because Worry-Free Business Security is easy to install and deploy requiring zero administration and automatic configuration provides the ideal combination of flexibility and security for laptop-toting employees. Only Trend Micro offers web threat protection that addresses the exponential growth of web threats with constant updates that won't slow PCs down. Our knowledge base rapidly deploys to defend all our customers like a global neighborhood watch.

# InterScan Messaging Hosted Security

Trend Micro's hosted email security solution blocks spam, viruses, phishing, and other email threats before they reach your network. As a hosted solution, it requires no hardware or software, and helps you reclaim IT staff time, end-user productivity, bandwidth, mail server storage and cpu capacity. In addition, Trend Micro's worldwide team of experts manages all hot fixes, patches, updates and application tuning so that solution performance is continuously optimized.

## Key Features

- Stops up to 99% of spam – and other email threats – before they reach the network
- Enables customers to reclaim IT staff time, end-user productivity and IT resources
- Assures email privacy with automated email pass-through without human intervention
- Ensures continuously optimized performance; Trend Micro experts manage all updates and application tuning
- Offers rapid deployment with no hardware or software costs

## Implementation Options

### Standard Option

Filters inbound traffic to stop spam and other email threats with simplified protection defaults, choice of spam actions, and updates and tuning by Trend Micro.

### Advanced Option

- Filters inbound and outbound email traffic and provides granular access and control for increased spam blocking effectiveness and lower false positives. Includes content filtering to help enforce compliance and prevent data leaks.

## Threat Protection

- Spam
- Blended Threats
- Viruses
- Spyware
- Phishing
- Inappropriate content

## Protection Points

- In the Cloud

# Message Archiver for Exchange

Trend Micro™ Message Archiver efficiently manages secure email storage in mid-size companies. It provides fast, easy search capability and reduced storage cost, while enabling e-discovery and compliance with data retention regulations. Message Archiver lowers email storage costs by reducing data on the mail server by as much as 80 percent. The tamper-proof archiving solution allows authorized personnel to search and retrieve emails and attachments quickly throughout an organization. It uses timestamps and encryption to ensure the authenticity of messages. Message Archiver also protects employee privacy by logging transcripts of privileged-user searches that can be sent to a designated Data Guardian.

## Key Features

- **Reduces data storage** by optimizing email system with single-instance storage, advanced compression and integration with Microsoft™ Exchange
- **Improves productivity** through advanced search capability that indexes all emails and attachments

## Effective Email Archiving

- Data protection
- Regulatory compliance
- Electronic discovery

### Rapid e-Discovery and Efficient Storage Management

Now that businesses rely more on email for records, analysts estimate that 80 percent<sup>1</sup> of a company's intellectual property is contained in its email. By 2011, a typical email account will send and receive 28MB of data per day.<sup>2</sup> For a 500-user organization, that's more than a gigabyte every day. Complying with government regulations is raising the cost of managing and storing email. Plus, companies need to be able to produce historic emails promptly during investigations. This is making the task of managing mail systems more complex for system administrators.

**Trend Micro™ Message Archiver** efficiently manages secure email storage in mid-size companies. It provides fast, easy search capability and reduced storage cost, while enabling e-discovery and compliance with data retention regulations. Message Archiver lowers email storage costs by reducing data on the mail server by as much as 80 percent. The tamper-proof archiving solution allows authorized personnel to search and retrieve emails and attachments quickly throughout an organization. It uses timestamps and encryption to ensure the authenticity of messages. Message Archiver also protects employee privacy by logging transcripts of privileged-user searches that can be sent to a designated Data Guardian.

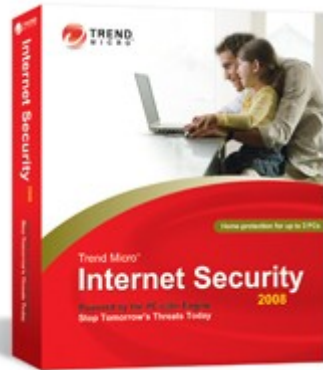

# PMF Remote Monitoring

Remote monitoring allows the Trend Micro antivirus software installed on your server to communicate critical and non-critical events in many cases before you may even know a problem exists. These events can include such things as client deployment problems, client update problems, or even virus detections.

Remote monitoring does not allow the remote resolution of problems unless you have an existing Complete IT Management agreement. Additionally absolutely no remote access to any of your data is available through the remote monitoring system.

If you would like additional details please contact your PMF representative.
